Pred. No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FT regulates flowering in plants by modulating flowering time. Overexpression of FT results in early flowering, while loss of function mutations or antisense directed to FT causes late flowering. The FT polypeptide has a molecular weight of approximately 20kD, and is located on chromosome 1. The FT polypeptide is used in the invention to modulate flowering time in many mono and di-cotyledonous plants. The FT polypeptide, and as a source of antisense, ribozyme or triplex forming sequences. The FT polypeptide can also be used to raise antibodies and to screen for modulators or cellular binding proteins. The methods of the invention allow for the production of crops at any time of year.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                      rhis is the flowering locus T (FT) gene antisense polynucleotide sequence. This sequence is used in the production of the antisense construct of the invention pSKIO60. FT regulates flowering in plants by modulating flowering time. Overexpression of FT results in early flowering, while loss of function mutations or antisense directed to FT causes late flowering. The FT polypeptide has a molecular weight of approximately 20kD, and is located on chromosome 1. The FT polypeptide is used in the invention to modulate flowering time in many mono and di-cotyledonous plants. The FT polypeptide sequence is used for recombinant production of the polypeptide, and as a source of antisense, ribozyme or triplex forming sequences. The FT polypeptide can also be used to raise antibodies and to screen for modulators or cellular binding proteins. The methods of the invention allow for the production of crops at any time of year.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Flowering

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the present invention describes a method to accelerate plant generation and generation accelerated plants. The method uses a controlling gene functioning in the downstream of a gene under the control of solar radiation to accelerate plant generation using a gene functioning to accelerate the flowering time regardless of solar radiation. The method can control flowering time regardless of solar radiation. The method can control flowering time to a desired period by shortening the juvenile stage. The present sequence represents a specifically claimed farabloopsis nucleotide sequence, which is used in the exemplification and the present sequence, which is used in the exemplification and the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A method plants -

                                                                                                                                                                                                           the present invention describes a method to accelerate plant generation and generation accelerated plants. The method uses a controlling gene functioning in the downstream of a gene under the control of solar radiation to accelerate plant generation using a gene functioning to accelerate the flowering time regardless of solar radiation. The method can control flowering time to a desired period by shortening the juvenile stage. The present sequence represents a specifically claimed Arabidopsis nucleotide sequence, which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A method to accelerate plants -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the nucleic acid and protein sequences of a number of proteins from the strawberry which are involved in the regulation of flowering. These were identified using primers based on the homologous sequences from A. thaliana, B. napus and R. sativus. They can be used in the production of transgenic field crops whose flowering is regulated and the time of fruiting and harvesting can be manipulated.

A cDNA clone (AAT60140) codes for the terminal flower1 (TFL1) protein (AAW13945) of Arabidopsis thaliana. It was obtd. from an Arabidopsis expressed sequence tag, clone 129D7T. A genomic till clone (AAT60142) has also been obtd. The wild-type role of the till gene is to inhibit flowering and to prevent the apical meristem from switching to a floral fate. The till gene was identified as a homologue of the Antirrhinum centraradialis gene (see also AAT60141). The flowering characteristics of transgenic plants, esp. switching of apical meristem to a floral fate and the timing of flowering, can be manipulated by regulating cen or till gene expression.
                                                                                                                                                                                                                                                                              Antirrhinum majus centroradialis gene and Arabidopsis homologue, Tfll - control switching of apical meristem to floral fate, use in plant hybridisation and in control of growing season
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mutation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      dd
The invention describes a substantially purified or isolated polypeptide CC (I) from a ryegrass (Lolium sp.) or fescue (Festuca sp.) species, such as CC MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like CC proteins, APETALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) and WADS-like proteins, or their functionally active fragments or variants. CC Nucleic acid (II) encoding (I), a construct (III) comprising (II), or a construct (III) population (II), or a certor (IV) comprising (II), is useful for modifying plant life cycles and/or growth phases, flowering processes, flowering and/or plant. The CC which involves introducing (II), (III) or (IV) into the plant. The CC which involves introducing (II), (III) or (IV) into the plant. The CC individual or simultaneous enhancement or downregulation of MADS-box gene activities may alter flower, embryo and seed development, e.g., CC enhance or inhibit embryo differentiation and growth or alter flower organ identity through conversion of one floral organ in another. CC Manipulation of CEN or HB activity in plants alters the control of phase change, flowering time and the number of leaves made before flowering. Manipulation of AP2 activity in plants alters flower organ identity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ryegrass; fescue; MADS-box; MADS; MADS-like protein; CENTRORADIALIS; CEN; CEN-like protein; APETALA2; AP2; AP2-like protein; HB; Hb; Pontein; Plant growth; Plant architecture; inflorescence development; flower development; embryo development; seed development; flower organ identity; phase architecture; bybrid seed production; herbage quality; early maturing crop; biomass increase; branching increase; blocking flowering; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass fescue species, useful for controlling plant life cycles and/or growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (AGRI-)

                                                                                                                                                                                                                                                                              C(1) from a rygrams (Lolium sp.) or fescue (Festucas sp.) species, such as C(MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like proteins, Homeo-box proteins (HB) CC and HB-like proteins, or their functionally active fragments or variants. Nucleic acid (II) encoding (I), a construct (II) comprising (II), or a construct (III) comprising (II), or a cycles architecture and/or flower and/or inflorescence development in a plant, children for architecture and/or flower and/or inflorescence development in a plant, conditionally activities may alter flower, embryo and seed development. The cordination of samultaneous enhancement or downregulation or Ands-box corgan identity through conversion of one floral organ in another. CC manipulation of CEN or HB activity in plants alters the control of phase change, flowering time and the number of leaves made before flowering. CC through conversion of one floral organ in another. Plant architecture has a wide range of applications such as: inducing male sterility for hybrid seed production; changing flower for architecture for enhancing value of ornamentals; delaying flowering in activity altering architecture. Manipulation of corpus; delaying vegetative phase to increase biomass production; changing those architecture for enhancing value of ornamentals; delaying flower in activity altering architecture. Manipulation of corpus; delaying vegetative phase to increase biomass production; changing corpus; delaying vegetative phase to increase biomass production; changing corpus; delaying vegetative phases to increase biomass production; changing carly corpus; delaying vegetative phases to increase biomass production; change and reducing corpus; delaying vegetative phases to increase biomass production; change of allering plant to enhanced business in fruit trees; altering plant carrier for manipulation plant life cycles.
                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass or fescue species, useful for controlling plant life cycles and/or growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (AGRI-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19-OCT-2000;

New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass or fescue species, useful for controlling plant life cycles and/or growth

The invention describes a substantially purified or (I) from a ryegrass (Lolium $\operatorname{sp.}$) or fescue (Festuca

isolated polypeptide
sp.) species, such a

such as

Claim 4; Fig 32;

290pp; English

CENTRORADIALIS, fescue species,

CC Manipulation of CEN or HB activity in plants alters the control of phase CC Manipulation of AP2 activity in plants alters flower organ identity coversion of one floral organ in another, leads to a change in the number of leaves made before flowering. CC through conversion of one floral organ in another, leads to a change in the number of floral organs and flowering architecture. Manipulation of CC inducing male sterility for hybrid seed production; changing flower in architecture for enhancing value of ornamentals; delaying flowering in CC croage grasses thus stopping the formation of less digestible stems and increasing herbage quality; altering flowering time allowing early concreasing branching to enhanced business in fruit trees; altering plant concrease boundars production; increasing branching to enhanced business in fruit trees; altering plant conclude onvel floral meristem identity protein involved in floral development and a potential target for manipulating plant life cycles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Sin

Claim 4; Fig 49; 290pp; English

CC (I) from a regerates (Lolium Sp.) or fescue (Festuca Sp.) species, such as CC MADS-box (MADS) and MADS-like proteins, CENYRORADIALIS (CEN) and CEN-like proteins, A PETALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) CC and HB-like proteins, or their functionally active fragments or variants. CC Nucleic acid (II) encoding (I), a construct (III) comprising (II), or a construct (III) comprising construct (III) comprising and plant. The construction of construction of construction of construction and growth or alter flower corporation of construction and growth or alter flower corporation of construction and growth or alter flower ing. CC change, flowering time and the number of leaves made before flowering. CC change, flowering time and the number of leaves made before flowering. CC change, flowering time and flowering architecture. Manipulation of construction of construction of construction construction of construction construction. This seed production, changing flower construction construction involved in flowering time allowing early and construction involved in flowering and reducting construction involved in flower construction. invention describes a substantially purified or isolated polypeptide cycles

New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass fescue species, useful for controlling plant life cycles and/or growtphases . grass or

Claim 3; Fig 32; 290pp;

Nucleic acid (II) encoding (I), a construct (III) comprising (II), or a C vector (IV) comprising (II), is useful for modifying plant life cycles and/or growth phases, flowering processes, flowering and/or plant CC architecture and/or flower and/or inflorescence development in a plant, CC which involves introducing (II), (III) or (IV) into the plant. The cindividual or simultaneous enhancement or downregulation of MADS-box CC gene activities may alter flower, embryo and seed development, e.g., CC enhance or inhibit embryo differentiation and growth or alter flower CC organ identity through conversion of one floral organ in another.
CC Manipulation of CEN or HB activity in plants alters the control of phase CC change, flowering time and the number of leaves made before flowering. CC Manipulation of one floral organ in another. Heads to a change in the number of floral organs and flowering architecture. Manipulation of the activity in plants alters flower organ identity through conversion of one floral organ in another. Heads to a change in the number of floral organs and flowering architecture. Manipulation of floral organs and flowering architecture manipulation of the number of floral organs and flowering architecture. flowering plant architecture has a wide range of applications such as: inducing male sterility for hybrid seed production; changing flower architecture for enhancing value of ornamentals; delaying flowering in forage grasses thus stopping the formation of less digestible stems and increasing herbage quality; altering flowering time allowing early maturing crops; delaying vegetative phase to increase blomass production; increasing branching to enhanced business in fruit trees; altering plant size e.g. shorter plant stature; and in blocking flowering and reducing release for allergenic pollen. This sequence represents a contiguous polynucleotide novel floral meristem identity protein involved in floral development and a potential terroit for manifulation plant. The invention describes a substantially purified or isolated polypeptide (I) from a ryegrass (Lolium sp.) or fescue (Festuca sp.) species, such as MADS-box (MADS) and MADS-like proteins, CENTRORADIALIS (CEN) and CEN-like proteins, APETALA2 (AP2) and AP2-like proteins, Homeo-box proteins (HB) and HB-like proteins, or their functionally active fragments or variants. development and a potential target for manipulating plant life cycles.

Sequence 787 BP; 194 A; 180 C; 179 G; 228 T; 6 other;

                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the nucleic acid and protein sequences of a number of proteins from the strawberry which are involved in the regulation of flowering. These were identified using primers based on the homologous sequences from A. thaliana, B. napus and R. sativus. They can be used in the production of transgenic field crops whose flowering is regulated and the time of fruiting and harvesting can be manipulated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Strawberry; flowering regulation; harvesting; fruit production; ss.
